

# Hosted Firewall, Enterprise

- **Ultimate freedom of choice and scalability**
- **Hardware of highest industry standards**
- **Customised to your specific needs**
- **Integral part of GlobalConnect's Internet and cloud services**
- **Integration to network solutions via GlobalConnect's fibre network**

## **Safest firewall in the industry – without having your own equipment**

Hosted Firewall provides you and your company with optimum protection against unwanted traffic from the Internet without having to invest in your own expensive equipment. The solution is based on the Crossbeam X80 platform from Blue Coat Systems and the Check Point Security Gateway.

## **Leave the work to others**

We have implemented Hosted Firewall on a fully redundant, modular platform to the highest industry standards - and a service agreement offering guaranteed uptime is naturally a matter of course. You will benefit from one of the best firewalls in the market without having to maintain in-house expertise and occupy resources for this highly specialized task.

## **Security**

Protection against unwanted traffic from the Internet is a core prerequisite of most IT security policies and contingency plans. Besides, the strong growth in Internet traffic will increase the strain on both

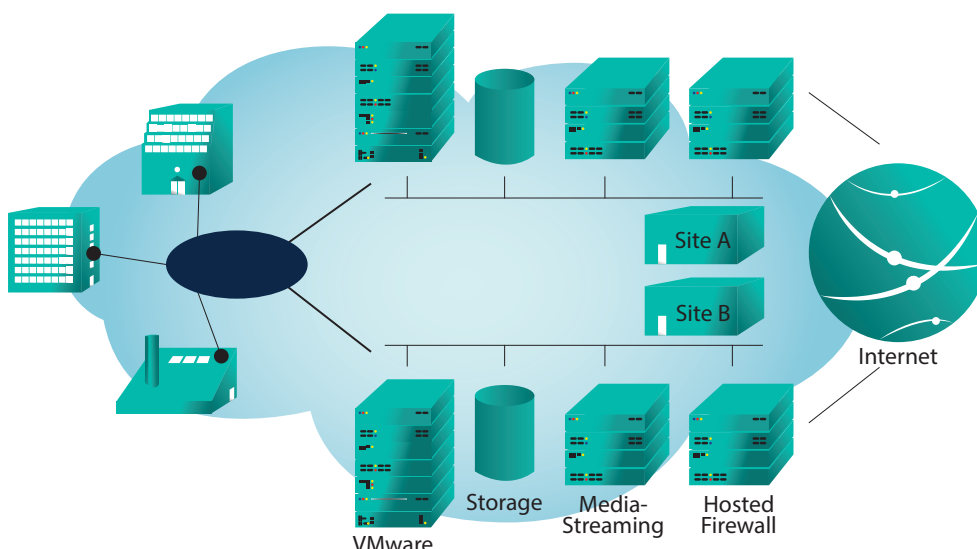

your Internet connection and your firewall. The monthly payment for Hosted Firewall covers four hours of security checks carried out by a security consultant. This means that we will overhaul your security systems at regular intervals so that you can stay reassured that they are fully operational at all times. We will make sure always to keep your firewall configurations up to date, and we continuously analyse your overall network structure.

## **Pay As You Grow**

With a Hosted Firewall solution, you can continuously adjust your firewall capacity – i.e. 'pay-as-you-grow' – without investing massively in large-scale firewall solutions that are often needed for capacity upgrades. Furthermore, you avoid sudden drops in performance when the CPU load of your firewall becomes too high.

## **A redundant solution to the highest standards**

Our Hosted Firewall is built on a fully redundant and scalable platform that delivers optimum performance and security. GlobalConnect's SLA levels are among the best in the industry.

**Figure 1:** Hosted Firewall can be included in a complete network and cloud solution from GlobalConnect

# Technical data

<b>Hardwareplatform</b>	Crossbeam X80, CheckPoint solution
<b>Security package</b>	<b>Enterprise</b>
Support 24/7 via OMC	Yes
Supervision of service	Yes
Automatic update of software and services	Yes
Predefined rules in firewall	Yes
Dual site failover-solution	Yes
Site to Site VPN-support	Yes
Predefined public services (Access)	Yes
Predefined objects	Yes
Customer specific public services (Access)	Yes
Customer specific objects	Yes
Monthly analyses of log-data	Yes
Bandwith	Unlimited
Public IP-adresses	Unlimited, optional
Internal IP-adresses	Unlimited
DMZ zones	Unlimited
Logdata, retention	12 months
Security Consultant Hours per month	4
<b>Network configuration</b>	Individual designs
<b>Uptime</b>	99,9%
